Statement of Plug-In Texas RE: Nissan LEAF Zero-Emission Visit to Houston

“Plug-In Texas appreciates Nissan including Houston on its Zero-Emission Tour, and commends Reliant Energy for developing a charging network that will help make the City of Houston an early adopter in this emerging industry. The City of Houston should also be recognized for integrating plug-in hybrids into its fleet and for developing programs to help prepare the city for wide-scale adoption of electric vehicles.

This is the type of collaboration Texas needs to move forward as a leader in electric vehicles.

Plug-In Texas is committed to raising awareness of electric vehicles and their benefits to the Lone Star State.”

###

About Plug-In Texas: *Plug-In Texas is a broad-based and growing statewide coalition of private and public interests dedicated to supporting policy changes that promote battery electric, plug-in hybrid and all-electric vehicles in Texas, as well as the infrastructure needed to support them. Plug-In Texas will support activities that create new jobs, foster development of new technologies, improve environmental conditions and spur economic activity that supports the electric vehicle industry. The coalition intends to serve as a clearinghouse for information on EVs, and will support initiatives that market their development and promote their commercial viability.
